

# New Energy News

VOLUME 8, NUMBER 3  
MARCH, 2001

ISSN 1075-0045

Editor: Patrick Bailey  
Web Page: [www.padrak.com/ine/](http://www.padrak.com/ine/)  
E-mail: [halffox@qwest.net](mailto:halffox@qwest.net) or [ine@padrak.com](mailto:ine@padrak.com)

Hereafter, New Energy News (NEN) will be sent by email in two forms: Regular ASCII (the most basic form for computer handling of alphabetic characters) and also as a \*.pdf file. If you have Adobe Acrobat on your computer you can easily read any file with a \*.pdf file extension. If you do not have Adobe Acrobat, you can download it from the Internet for free. Alternatively, mail \$2 (for S&H) to NEN, 3084 E. 3300 South, Salt Lake City, UT 84109, together with YOUR MAILING ADDRESS and we will send you an Adobe Acrobat CD-ROM in the mail.

\*\*\*\*\*

## ITEMS FOR NEN

If you find new-energy items that you believe others would like to read, send them by mail or email to us and we will give credit to the first person that sends in any particular item. Your help will make NEN a better source of new-energy information.

## PRESIDENT'S PERSPECTIVE - MARCH 2001

**Patrick Bailey, INE President**

Well, it certainly is an interesting time to be concerned about the politics and costs of electricity generation and transmission. Especially if you live in California, as I do. This topic is in the news and on TV every day here.

The unfortunate thing that I see happening, is the same thing that we all

have seen happening in the advanced energy conversion field for the last 10 years: lots of talk, lots of finger pointing, the usual upsets and slander, misrepresentation, and no action. To me, this condition is all based on one negative condition: a lack of integrity and responsibility.

It is very apparent to me, and maybe to some of you, that the energy crisis in California is not a sudden crisis, and is rather a well-planned and executed business operation put into motion by a few people to make the most money in the shortest amount of time. (Maybe there is a contest to see if they can beat the old "Pet Rock" toy. I think they did!)

In short the situation as I see it boils down to 1. Encrypted email; 2. Lack of electricity use oversight; 3. De-regulation of the electrical grid companies; 4. Un-restricted buying up of existing electrical generation plants by one particular company (Southern Company in Atlanta, GA); 5. No financial oversight agency; 6. No local, state, or federal laws to cover this situation; and 7. A complete lack by the existing news media to report the truth on these issues. Without going into all the details, this is just to me another "energy crisis" that has been artificially fabricated by a few to take advantage of a product that is needed by a very large number of people. We have seen this with oil, with sugar, with natural gas, and now with electricity. I guess water will be next.

The INE is still pursuing ALL forms of energy conversion that might be able to be used to not only generate more electricity for city, state, national, and federal military use - and is also pursuing energy conversion devices that will allow us to create electrical and thermal energy wherever we want. My personal goal is to be able to Put a small city wherever I want to build one.

The INE lists almost all of the devices that it has or is considering on its website at <http://www.padrak.com/ine/>  
We have over 130 devices listed, by name, by inventor name, and ranked by both scientific interest and commercial interest at <http://www.padrak.com/ine/DBGUIDE.html>  
(Case sensitive).

What are the results of all this?

1. Most of these devices are in their "replication" stage, and are being researched by their inventors and by others. These are not ready.
2. Some of these devices will probably never work. They are however still included for reference in the hopes that even they may finally "turn out".
3. A few of these devices are known frauds - especially the ones with rotating magnetic fields, where separate voltage and current meter readings are then just multiplied together to give the power, both input

and output of the device.

Such devices do not include what is called by EE's "the power factor", which is the cosine of the phase angle between the voltage and current waveforms. Using such simplistic methods, I can prove that the overunity quota for any such device (with pure AC waveforms) is  $1/\cos(\text{phase angle})$ , where the phase angle is the angle between the pure resistance (R) and the inductive minus the capacity reactance (XL-XC) in a x-y plane. Even as these devices are still advertised in newspapers, the INE will continue to follow them in the hopes that perhaps God or a higher power may divinely inspire the leaders of these groups with new and better technology knowledge, just because they have a large group of followers.

4. A few devices are being researched under agreements or contacts, and we do not get any information on their status, as that information is "proprietary".

5. Several devices are being "classified" by the federal government in the interests of "national security", as they are picked out of the US Patent process by the standing military review boards that function constantly within the Patent Office. This has happened to two people I know, and the "Secrecy Order" that they have received is listed on the INE website.

Inventors feel that in order to get any funding, that they must first get a US Patent. NO! This has been the sure path to suppression, as told by several inventors. Maybe a Trade Secret is better! (Like the ingredients for Coca-Cola!).

6. Several devices are being "hidden" and "awaiting funding". I have heard rumors about 5 of these that are now waiting for funding so that they each can be inserted into society at the same time in different parts of the world - in order to get the technology out. For these devices, the technology may now exist. The funding is then the only major problem.

The researchers on some devices have also been set-ups by "the authorities" on phony drug-manufacturing charges, while awaiting funds. I was told that one group was arrested in mid-March on such trumped-up charges. This also happened to Paul Brown in the early 1990s, just after his US patent had been granted. Coincidence? I don't think so.

7. The funding. Where can this come from? Well, thanks to the California energy crisis, it is going to be available very soon - maybe by the time that you read this. Several cities, counties, and even states are VERY concerned about the current energy issue. Some private organizations with LARGE assets are interested in assisting us get any new technology we can. As it turns out, the new lower interest rates will greatly assist all aspects of research in these areas.

So - my message is that things are broke, important people have noticed, and the ability to fix things may finally be here.

What does this mean to us? - It is time to put up or shut up.

At the present time, the INE is interested in machinery that works. Theory is interesting, but so what? (The world still looks flat to my Mom!) What matters is that a device functions, that it provides new insight into new physics - so that we can understand this new physics, and soon make new working commercial devices. We can worry about how to explain it later! We need long-term testing of new electrical generators and new low-emission carburetors soon! Business cares about things that work, not about what you think (the "news" cares about the latter).

We now stand at a time of opportunity: Funding is showing up. Project managers are available. Independent test engineers are available. Quality test equipment is available. If a device works, now is the time to tell someone.

Hushmail.com is free! To counter possible outside secret surveillance of such research, many people are now using hushmail.com as a means to send their own personal encrypted email. This has been shown to be very useful, as it is very easy for "them" to obtain copies of anyone's emails and to record anyone's phone or cell phone calls. If you wish to contact me using hush mail, just go to hushmail.com and set up an automatic account - where you do NOT put in any of your personal information. You will get an account number like "auto123456" to use, and you will have to create your own pass-phrase (a line of text) that is used to scramble your email messages every time you send or receive a hush mail email. You will also need to always use the same computer that you setup your account on. You can then mail to me your auto123456 account number - wrapped in tin foil - with the envelope edges sealed with tape - to Patrick Bailey, PO Box 201, Los Altos, CA 94023-0201, and I will be in contact with you.

The INE is here for all of us to work together and win together. Let's use it!

### **SHORT-TERM SOLUTION FOR ENERGY?**

By Hal Fox

The suggestion is being made to invest in short-term solutions to the current energy problems as provided especially by wind and sun. In my judgement there is no reason to encourage people to

invest in expensive short-term solutions when, with less capital, one or more of the new-energy systems could be put into production. There are four such technologies that can be placed into production during 2001-2002 with relatively modest capital investment. Our company, Emerging Energy Marketing Firm, Inc. (EEMF) is working on two of the four. We have been promised the funding required.

Here is my oft-cited list (and we receive contacts periodically from other new-energy developers with additional devices to be considered):

1. Randell Mills thermal-producing device which is characterized as collapsing the hydrogen atom below its ground state. See [www.blacklightpower.com](http://www.blacklightpower.com)
2. The independent discovery by Kenneth Shoulders, Hal Puthoff, the late Stan Gleeson, Alexander Ilyanock (Belarus), and Mesyats (Russia) of high density charge clusters. See U.S. Patent 5,018,180, the first patent to claim tapping zero point energy.
3. The Koldamasov device which reportedly produces 20 times as much thermal energy as input electrical energy.
4. Tom Bearden, et al., Stationary Electromagnetic Generator.

All are patented or have patents pending.

For less than \$10 million any one of these technologies can be put into commercial production within two years.

In my judgement each of these devices has the potential of providing thermal and/or electrical power at costs that are less than half the cost of power derived from solar, tide, wind, biomass, or geothermal.

#### WHAT IS THE DIFFICULTY THEN?

None of these devices are accepted by nor taught at educational institutions. Potential funders use academicians for their advice on investment opportunities. It is difficult for funders to risk their money with the unknowns. If all the scientists who are now or have been involved in the development of cold fusion would seriously investigate these new-energy devices and be available to consult with potential funders, then we could greatly accelerate the commercialization of these new-energy devices. Instead, as scientists, we tend to isolate ourselves in our own specialties and except for periodic academic presentations, we show little enthusiasm for pushing the commercialization of other-people's discoveries.

The best recent example we have had of many of this group working together was in support of Dr. Mitchell Swartz's attempt to get the Supreme Court to consider the gross neglect of the U.S. Office of Patents and Trademarks in allowing new technology to be patented.

This same group of concerned scientists has the potential of changing the way the world produces and distributes energy. The result will be a start to clean up this planet's polluted atmosphere. If we don't do it, we will leave an incredible mess for our children and our grandchildren to handle. Some types of both land and water living species are becoming extinct due to the continued pollution from burning of fossil fuels. So what are we doing? We are thoroughly discussing low-energy nuclear reaction products which have yet to be shown to be sufficient robust enough to become a commercial source of energy. In addition, other groups are funding and developing alternative energy devices and systems.

On the other hand, the market to be penetrated by new-energy devices is estimated at \$4.5 trillion per year! There are enormous profits to be made by replacing the burning of fossil fuels with new-energy devices that are inexpensive, non-polluting, and tap vast sources of energy. That is the greatest monetary opportunity that mankind has ever been provided! And where are the investors? They are investing their millions and billions in those who are touting the advantages of fuel cells, windmills, solar panels, and other alternative energy resources, all of which will rapidly become outdated and be replaced by new-energy technologies. The alternative energy bubble will soon join the dot.com bubble as billions of dollars of investment are wiped out by new-energy technologies.

\*\*\*\*\*

## **ENERGY CRISIS OR JUST (SLAVE) BUSINESS?**

Submitted by Patrick Bailey

I have heard several recent rumors that a specific company has been for years quietly buying up the electrical producing plants in the US, and that this one company is in fact a front for one well-known banking family in Europe: the Rothschilds. I do not know personally if this is true. From a banking standpoint, it would make good economic sense, if you didn't care at all about the people (i.e. slaves) that have to pay the electricity bills. I have talked to others who say that they know for certain that this story is true.

The company is called: Southern Company, located in Atlanta, Georgia.

Below are website links that have been sent to me to research this company.

Do your own research: If this is true, then please do not hesitate to contact your local sheriff, power company, Governor, and President to forcefully and strongly complain.

Also of interest was this hit when using the hotbot.com search engine to research the "Rothschild" name: Who owns the Fed? Chart of who "owns" the Federal Reserve Chart 1 Federal Reserve Directors: A Study of Corporate and Banking Influence Published 1976. Chart 1 reveals the linear connection between the Rothschilds and the Bank of England, and the London banking house.

## The "TR3-B":

### POSSIBLE ANTI-GRAVITY MAN-MADE TRIANGULAR UFO?

Submitted by Patrick Bailey

Many sightings and references have been made in the past 10 years of triangular flying craft or UFOs seen in the US and Europe. Are these ours?

Old Sanskrit texts speak of flying craft in India powered by heated rotating mercury in iron pots. Has this technology been revived?

Here is some of the text from: <http://www.colinmil.mcmail.com/tr3b.htm>

Quote:

Possible TR3-B?

Yes I know you've seen the photo on the Aurora page, but as it's the only one I have it will have to do. I do ask if this is Aurora or "Something Else".

I think it just may be possible that it is the TR-3B, but as very little is know about the aircraft it is by no means certain.

[Snip]

TR-3B?

Copyright 1998 by Fouche Media Associates  
From "Alien Rapture" by Edgar Fouche & Brad Steiger

A friend said, he would never forget the sight of the alien looking TR-3B based at Papoose. The pitch black, triangular shaped TR-3B was rarely mentioned--and then, only in hushed whispers--at the Groom Lake facility where he worked. The craft had flown over the Groom Lake runway in complete silence and magically stopped above Area S-4. It hovered silently in the same position, for some 10 minutes, before gently settling vertically to the tarmac. At times a corona of silver blue light glowed around the circumference of the massive TR-3B. The operational model is 600 feet across.

[Snip]

A circular, plasma filled accelerator ring called the Magnetic Field Disrupter, surrounds the rotatable crew compartments and is far ahead of any imaginable technology.

Sandia and Livermore laboratories developed the reverse engineered MFD technology. The government will go to any lengths to protect this

technology. The plasma, mercury based, is pressurized at 250,000 atmospheres at a temperature of 150 degrees Kelvin and accelerated to 50,000 rpm to create a super-conductive plasma with the resulting gravity disruption. The MFD generates a magnetic vortex field, which disrupts or neutralizes the effects of gravity on mass within proximity, by 89 percent. Do not misunderstand. This is not antigravity. Anti-gravity provides a repulsive force that can be used for propulsion. The MFD creates a disruption of the Earth's gravitational field upon the mass within the circular accelerator.

The mass of the circular accelerator and all mass within the accelerator, such as the crew capsule, avionics, MFD systems, fuels, crew environmental systems, and the nuclear reactor, are reduced by 89%. This causes the effect of making the vehicle extremely light and able to outperform and outmaneuver any craft yet constructed--except, of course, those UFOs we did not build.

The TR-3B is a high altitude, stealth, reconnaissance platform with an indefinite loiter time. Once you get it up there at speed, it doesn't take much propulsion to maintain altitude. At Groom Lake there have been whispered rumours of a new element that acts as a catalyst to the plasma.

With the vehicle mass reduced by 89%, the craft can travel at Mach 9, vertically or horizontally. My source say the performance is limited only the stresses that the human pilots can endure. Which is a lot, really, considering along with the 89% reduction in mass, the G forces are also reduced by 89%.

[More... see the website.]

## **BOOK REVIEW**

\*\*\*\*\*  
\*\*\*\*\*  
\*\*\*\*\*

### **HEALING ENERGIES OF LIGHT BY ROGER COGHILL**

[http://www.tuttlepublishing.com/title.cgi?title\\_id=1457](http://www.tuttlepublishing.com/title.cgi?title_id=1457)

Author website: <http://www.cogreslab.demon.co.uk>

Submitted by Remy Chevalier

ISBN: 1582900124

Price: \$17.95

It is no mystery why more illnesses – both physical and psychological –

strike in the winter, when the days are shorter and humans are deprived of light. But readers may be surprised to discover how exactly light works its healing magic—and what some of the astounding new light therapies are. In *Healing Energies of Light*, research biologist Roger Coghill offers an extraordinary tome on light, its history, uses, science, and cutting-edge therapies. He expertly explores:

- Sacred symbols, mythologies, and rituals of light in different cultures throughout the ages
- The physiological effects of light and darkness and how they affect circadian and biological rhythms, as well as depression, alcoholism, and psychosis
- The importance of full-spectrum light and how safe-sun practices can afford us our much-needed daily dose of UV light
- Home light techniques to treat depression, SAD (Seasonal Affective Disorder), and PMS
- The newest light-therapy methods, how they differ, and much more.

#### About the Author

Roger Coghill is a Cambridge-trained research biologist and consumer advocate specializing in the effects of electromagnetic fields on human, animal, and planetary health. He is the co-author of *Dark Side of the Brain*, and author of *something in the Air* and *Electro-pollution: How to Protect Yourself against It*.

### ADVANCED PHYSICS AND THE GREAT PYRAMID AT GIZA

Submitted by: Patrick Bailey

We have all seen and heard various programs describing how the Great Pyramid on the Giza Plateau in Cairo, Egypt was built about 2,000 BC by Pharaoh Khufu using human slave labor with ropes and sand ramps.

Well, I think that we could not even attempt to build such a pyramid today, and that the Great Pyramid represents lots of advanced technologies that we do not have today. Also, the Great Pyramid may indeed be a storehouse of advanced scientific devices and equipment left to us by a past civilization that was more advanced than we are today.

Now before I lose your interest altogether, consider (and learn) that:

(1). People working for the Egyptian Government (and its museums) must at least publicly support the Moslem book, the Koran, in which it is stated that our civilization began around 2,000 BC;

(2). All of the theories proposed as to how the pyramids were built have been shown to not work when carefully analyzed, and when the manpower, housing, food, and transportation logistics are taken into account (just for the limestone blocks; never mind the huge granite blocks);

(3). Popular descriptions of the ascending passage and of the burial coffer in the King's Chamber are very misleading, as the passage that tourists use today was originally blocked by three tightly-fitting massive granite blocks (which were built there), and the coffer in the King's Chamber does not have a lid, and in fact the door is too small to get such a lid in (and how would you get it out of a passage that wasn't there before it was chiseled around those granite blocks).

In addition: the cartouche that "the authorities" now use to show that Khufu built the Great Pyramid is in fact a well-known and well-documented hoax, since 1981.

So much for those "National Geographic" videos.

The paperback book "The Eyes of the Sphinx" by Eric von Daniken on pages 205-215 documents in extracting detail, using the published works of Zecharia Sitchin (1981 and 1988), how Howard Vyse painted that cartouche in a chamber above the King's Chamber, and how the characters used were wrong (as published in Vyse's time) and how the symbols used did not even exist in Khufu's time. Thus: another lie in America is exposed. \*

This should be of interest to all advanced energy a researcher because:

These massive stone monuments were built somehow - and we do not have a clue how today - probably by some sort of force field. The use of highly polished walls and high quartz content in the granite under tremendous pressure reminds us of wave-guides and piezo-electric generation devices (like a record needle, only on a giant scale). The use of obelisks in pairs (the way there were) reminds us of Tesla energy towers with 100 volts perimeter available in the atmosphere) and of tuning forks. The rather recent discovery of metal hinges by that small robot shows that metal was used at that time. In summary - these large machines did something. Tesla wanted to do something. T. Henry Moray did something. Lots of UFO pictures show protruding vertical antennas. Etc.

Am I interested in the future application of these ideas? You bet. I was emailed a summary copy of pages 205-215. If you would like a copy of this, email me at [ine@padrak.com](mailto:ine@padrak.com) with the Subject Line: Book Pages.

\*\*\*\*\*

**NEW MAGNETIC-ELECTRIC DEVICE  
CAN POWER HOME FROM NEAR  
FREE ENERGY SOURCE**

By Penny Robins

Reference: The Cairns Post - Northern Queensland, OZ  
3-8-1

<http://www.Rense.com/general9/unveil.htm>

[Visit the above link to see a news article and photograph of the inventors and reported free energy machine.]

*Note from Patrick Bailey*

*Investigators at INE have been looking into this device for over three months now, and we are very concerned about their measurement techniques and their sincerity. It might just turn out to be another group of people that either do not know, how to use meter readings to calculate real power levels, or a deliberate misrepresented financial scam.*

(Note - 'Ergon' refers to the local electricity supplier utility, which used to be known as the FNQEB Far North Queensland Electricity Board).

Two Cairns inventors yesterday unveiled a world first commercial machine, which can power a house from a permanent, clean, green and virtually free energy source.

The machine, developed by Brinsmead mechanical engineer John Christie and Edge Hil electrician Lou Brits, has an international patent pending and is expected to go on the market for \$4000-\$5000.

Relying on the attraction and repulsion of internal magnets, the Lutec 1000 operates continually on a pulse-like current 24 hours a day -- producing 24 kilowatts of power -- once it is kick started from a battery source.

The device is more than 500 per cent efficient, compared to a car, which is less than 40 per cent efficient and loses power through heat and friction.

No power lines would be needed to distribute energy from the individual power sources.

There is no heat, harmful emissions or airborne matter in the transmission.

## LETTER TO THE EDITOR

Dated Feb. 23, 2001  
To: Patrick Bailey, INE

Hi Pat,

You have a "need-to-know" about some recent info rolling in the door here, which is of MAJOR SIGNIFICANCE to the A/G field, it is proven to be true!

There has been an item on the Internet for several months now called "IT", which you may or may not be aware of.

"IT" has now been connected to the major prolific inventor Dean Kamen, of Manchester, N.H.

Kamen invented the climbing wheel chair, the compact dialysis machine, and many other important recent inventions, which have cost him millions of \$s over the years.

At about this same time frame an announcement came from Russia, about a group there who have managed to understand and build John Searl's "lafa" (sp.?) "Rings and rollers" magnetic A/G system, which most of us could not understand.

A connection was made between this Russian Group (Grodin, et. al.) with Kamen, and apparently he funded their efforts.

All this is mostly circumstantial evidence, at this point, but the REA: KEY INFO is the fact that both groups will be featured at the upcoming G.A.G.F.E. (German Association for Gravity Field Energy) scheduled for mid-June 2001 in Switzerland.

Kamen will be the KEY SPEAKER there and apparently the Russians will be showing their prototype Searl unit there!

This is BIG NEWS, to the A/G field, but I'm not sure if it fits in with N/E, at this point.

This info comes from a reliable source, [intentionally deleted], who continually scans the I/N for news like this.

Regards,

Don Kelly

\*\*\*\*\*

**PATRICK BAILEY FORWARDED THIS LETTER FROM DAVID CROCKETT WILLIAMS TO SAN JOSE MAYOR RON GONZALES, CONCERNING ENERGY SUMMIT FOLLOW-UP**

Dear Mayor Gonzales:

Please accept my thanks and appreciation for the kind response of Julie Shiohita from your office accepting my new-energy technologies brief, as a public comment/input for your regional energy summit in San Jose, which I also posted for public reference at <http://groups.yahoo.com/group/dcwilliams/message/93>

I was especially appreciative of her acknowledgment of my brief in her email of March 15th saying, "We will include in the public comment section to be distributed to all of the presenters/participants attending the summit..." but we did not find it in the compilation given to the presenters. Perhaps there was some confusion because I had indicated that Dr. Wood's associate, Dean House, would be there to represent this information but they were unable to come until the last hour.

I thought I should send this follow-up note with a bit more specific suggestions since the Mercury News article of March 17th <http://www0.mercurycenter.com/premium/local/docs/summit17.htm> said that "There were no specific new proposals Friday". Perhaps my input/report was not considered "specific" enough or it was not "proposed" as formally/officially as I had planned by asking Dean to present it earlier at public comments time.

Among the many ideas for new energy technologies I summarized in my brief, you might consider looking first into the "Water and Power Plant" technology that Dean has details on. This was an accidental discovery by a prominent mining equipment engineer of Dean's acquaintance who developed a process for separating aqueous solutions and suspensions into pure water with other components selectively removed by bombarding the liquid with various sound frequencies, i.e., "sonic flocculation". When he met another such engineer with an analogous system that works on an ultra-centrifuge process, they decided to combine the two devices in a test for maximizing efficiency in the mining

industry and were surprised to find an unexplainably huge amount of steam produced as a by-product from an undetermined energy source. This steam can be harnessed to power electric turbines, not only to power the combined system but to produce the excess electric power noted in my brief.

Such a "Water and Power Plant" would thus not only purify water such as sewage waste water or sea water but also produce usable electricity in large amounts. While the understanding of how this works, vis a vis theoretical physics, is not yet understood (perhaps it taps the "zero-point energy"?), this technology nevertheless appears to be ready now for commercial exploitation and might be an ideal alternative for the Gilroy area situation.

This system could also be ideal for applications in Mexico and might be a good joint venture between investors and industry in San Jose and the Mexican energy industry. Since I understand that Mexico's President Vicente Fox will be visiting your area in the near future, this might be something to look into for presentation on that occasion.

This note is also to encourage you to follow up on this matter by meeting with longtime San Jose resident Dr. Fred B. Wood, Sr., referenced in my brief, who many of us consider a "national treasure" because of his understanding of this issue from his position as an "elder of the American scientific community (Ph.D. in electrical engineering) who has been at the forefront of science and technology in systems engineering from his pioneering work in targeting radar during WWII through his present work under auspices of the Computer Social Impact Institute and as a principal of the International Society for the Systems Sciences where he is regarded as "one of the fathers of systems theory".

Because of his credentials and professional history with IBM where he worked under still-applicable federal secrecy agreements, Dr. Wood is in a most unique and valuable position not only as a liaison to the industrial community on these matters but also to the government authorities who he regularly lobbies conscientiously for relaxation of secrecy restrictions on these scientific advances which are kept from the public domain by "dual-use" (civilian vs. military use) regulations.

Given the "energy crisis" now faced locally and globally it is very important for the energy and hi-tech manufacturing industries, local governments, and the public via press coverage, to become more fully aware of the potential immediate and long range applications and implications of this "new-energy technology" genre which we so strongly feel has the potential to replace nuclear and fossil fuel power entirely along with their attendant dangers, pollutions, high costs, and the role of energy resource access struggles at the root of so much war and strife around the globe. [E.g., current expansion of "Plan Colombia" by President Bush into "The Andean Initiative" that some reporters see as

leading to a "next Vietnam War" in that region to access oil supplies  
<http://www.narconews.com/gorman3.html>

and <http://www.copvcia.com>

This may be the only way, through knowledgeable public pressure, that we can accelerate the industrial applications of this new knowledge -- as public pressure to relax such secrecy restrictions filters up to the Federal Government.

One of Dr. Wood's main concerns, which he is officially limited in how much he can discuss, is the degree to which these recent decades' advances in electromagnetism are being applied, instead of to available peaceful energy generation technologies, to advanced electromagnetic weaponry by various nations some of which are hostile to the United States.

I have posted a couple of web pages about Dr. Wood, and his message which he presented to two conferences I organized in the last few years, at:

<http://www.angelfire.com/on/GEAR2000/fwood.html>

and

<http://www.angelfire.com/on/GEAR2000/wood.html>

and

<http://www.angelfire.com/on/GEAR2000/wood2.html>

I have been advised by one of the editors of the San Jose Mercury News that they would be interested in interviewing Dr. Wood for a feature article on him and these new-energy matters if/when he is involved in "something newsworthy" in your area such as meeting with you and sharing his advise pursuant to my above referenced input to your energy summit.

Please give him every possible consideration in this regard and do whatever you can to help him and the people who are helping him in San Jose to bring these new energy technologies into the public arena as soon as possible.

Thank you very much,

David Crockett Williams

### **2001 INTERNATIONAL SYMPOSIUM ON ELECTRONICS AND THE ENVIRONMENT**

<http://computer.org/tab/ehsc/index.htm>

Date: May 7-9

Location: Denver, Colorado

Denver Marriott Tech Center

4900 South Syracuse

Denver, Colorado 80237

Phone: (303) 779-1100 Fax: (303) 770-6112

### **LIFE CYCLE ENVIRONMENTAL STEWARDSHIP FOR ELECTRONICS PRODUCTS**

The IEEE Technical Activities Board is pleased to announce the ninth IEEE International Symposium on Electronics and the Environment to be held at the Denver Marriott Tech Center, Denver, Colorado on May 7-9, 2001.

For information about joining the Electronics & the Environment Committee, please contact

Jayne F. Cerone

IEEE Technical Activities

445 Hoes Lane

Piscataway, NJ 08855-1331

phone: (908) 562-3908 fax: (908) 562-1769

email (Internet): [j.cerone@ieee.org](mailto:j.cerone@ieee.org)

For more information on the IEEE - ISEE Exhibits Program contact:

David Barber, Jr., Phone: (828) 898-6375,

## 11TH CANADIAN HYDROGEN CONFERENCE

### REMINDER

The 11th Canadian Hydrogen Conference will be held at the Victoria  
Conference Center, Victoria, BC from June 17 - 20, 2001.

The preliminary PROGRAM is now available on the conference website:  
[www.iesvic.uvic.ca](http://www.iesvic.uvic.ca)

Please make note of the following deadlines:

Early registration: April 30, 2001  
Hotel reservations: May 16, 2001

At the conference this year there will be representation from all areas of  
the hydrogen industry from novel methods of hydrogen production to new  
innovations in fuel cell systems. In addition to the plenaries and parallel  
sessions, the conference will include: extensive industrial demonstrations  
of new technologies student poster presentation employment forum  
evening public information session designed to promote new clean  
energy alternatives to a lay audience.

Please email or call the conference office if you require additional  
information.

Ged McLean  
Conference Chair

Institute for Integrated Energy Systems (IESVic)

Dear Colleges,

The 9<sup>th</sup> RUSSIAN CONFERENCE ON COLD NUCLEAR  
TRANSMUTATION (RCCNT-9) is to be held during September 30 –  
October 7, 2000. The place of the Conference is in Dagomys near the city  
of Sochi that is the best recreation and holiday place on the Black Sea shore  
of Russia.

The program of the Conference includes the following subjects  
\$ Experimental research in cold fusion, transmutation and ball lightning;  
\$ Theoretical models with respect to cold fusion effects;  
\$ Applied technologies and devices.

The organizing Committee of the Conference is pleased to invite you to  
attend the Conference. The terms of your participation are as follows:  
The full cost is \$900 which will include the registration fee, hotel reservation  
and living, three daily buffet meals, conference proceedings, transportation  
from the Sochi airport and back, social dinner and special excursion or  
entertainment.

The languages of the Conference are Russian and English.  
The total cost can be reduced down to \$800 if transferred before August 10

to the account of the Organizing Committee shown below:  
 Intermediary: Sabrrumm 100 Saving Bank of the Russian Federation  
 Moscow Bank;  
 Account with institution: 891200011 at Izmailovskoye Branch 2695/0437;  
 Account holder: Yuri Nikolaevich Bazhutov;  
**Personal account: 42304.840.9.3834.0600087**

The correspondence banks of the Moscow Saving Bank of Russian Federation in your country you will find attached.  
 If you make a decision to take part in the Conference please let us know before July 20 about the title and abstract of your report.  
 Contact telephone: (7)(095) 196-7117 (ask Mr. Igor Goryachev)  
 Fax: (7)(095) 196-6108
