

# INDEX

|   |    |
|---|----|
| <b>Index</b>  | i  |
| <b>Introduction</b>   | 1  |
| <b>Chapter 1 Successes of a Novel Gravity Interpretation</b>  | 7  |
| <b>The great Michelson &amp; Morley, Lorentz and Einstein trap</b>  | 9  |
| 1. The Michelson & Morley experiment, the Lorentz and the Einstein interpretation.  | 9  |
| 2. A null result means : a null result.   | 10 |
| 3. Conclusion.  | 11 |
| 4. References and interesting literature.   | 12 |
| <b>A coherent dual vector field theory for gravitation</b>  | 13 |
| 1. Introduction : the Maxwell analogy for gravitation: a short history.   | 14 |
| 2. Law of gravitational motion transfer.  | 14 |
| 3. Gyrotation of a moving mass in an external gravitational field.  | 15 |
| 4. Gyrotation of rotating bodies in a gravitational field.  | 16 |
| 5. Angular collapse into prograde orbits. Precession of orbital spinning objects.   | 16 |
| 6. Structure and formation of prograde disc Galaxies.   | 18 |
| 7. Unlimited maximum spin velocity of compact stars.  | 20 |
| 8. Origin of the shape of mass losses in supernovae.  | 21 |
| 9. Dynamo motion of the sun.  | 22 |
| 10. Binary stars with accretion disc.   | 22 |
| 11. Repulsion by moving masses.   | 24 |
| 12. Chaos explained by gyrotation.  | 24 |
| 13. The link between Relativity Theory and Gyrotation Theory.   | 25 |
| 14. Discussion : implications of the relationship between Relativity and Gyrotation   | 26 |
| 15. Conclusion  | 26 |
| 16. References  | 26 |
| <b>Lectures on “A coherent dual vector field theory for gravitation”.</b>   | 27 |
| Lecture A: a word on the Maxwell analogy  | 27 |
| Lecture B: a word on the flux theory approach   | 27 |
| Lecture C: a word on the application of the Stokes theorem and on loop integrals  | 28 |
| Lecture D: a word on the planetary systems  | 29 |
| Lecture E : a word on the formation of disk galaxies  | 31 |
| <b>Discussion: the Dual Gravitation Field versus the Relativity Theory</b>  | 33 |
| What is the extend of the Dual Gravitation Field Theory (Gravitomagnetism)?   | 33 |
| The centenary of the relativity theory.   | 33 |
| Lorentz’s transformation, Michelson-Morley’s experience, and Einstein’s relativity theory.  | 34 |
| Discussion of the experience of Michelson-Morley  | 34 |
| Galaxies with a spinning center.  | 35 |
| Worlds  | 35 |
| Experiment on ‘local absolute speed’  | 35 |
| Is the relativity theory wrong?   | 36 |
| Is the relativity theory compatible with the gravitomagnetism theory?   | 36 |
| Inertial mass and gravitational mass  | 36 |
| Conclusions.  | 37 |
| References.   | 37 |
| <b>Chapter 2 Saturn and its Dynamic Rings</b>   | 38 |
| <b>Why does Saturn have many tiny rings ?</b>   | 39 |
| 1. Introduction / <i>The Maxwell Analogy for gravitation / Law of gravitational motion transfer</i><br>– <i>Equations / Gyrotation of rotating bodies in a gravitational field.</i> | 40 |

|  |    |
|--|----|
| 2. Saturn's rings. / <i>Basic data / Formation of rings / Formation of gaps between the rings / Ring F : rotating gasses</i> | 41 |
| 3. Conclusion  | 45 |
| 4. References  | 45 |
| <b>On the dynamics of Saturn's spirally wound F-ring edge.</b>   | 46 |
| 1. The Maxwell Analogy for gravitation: equations and symbols.   | 46 |
| 2. The F-ring.   | 47 |
| 3. Discussion and conclusion.  | 52 |
| 4. References and interesting literature.  | 52 |
| <b>Chapter 3 The Ultimate Probation Tests for Gyrotation</b>   | 53 |
| <b>Did Einstein cheat ?</b>  | 54 |
| 1. Introduction: two competitive models.   | 55 |
| 2. The Maxwell Analogy for Gravitation: a short overview.  | 57 |
| 3. The Maxwell Analogy for Gravitation examined by Oleg Jefimenko.   | 57 |
| 4. The Maxwell analogy for gravitation examined by James A. Green.   | 59 |
| 5. General Relativity Theory: a dubious calibration?   | 60 |
| 6. Comparison with the Maxwell Analogy.  | 61 |
| 7. Has the Relativity Theory era been fertile so far?  | 64 |
| 8. Conclusion: Did Einstein cheat ?  | 65 |
| 9. References and interesting literature.  | 66 |
| <b>On the Origin of the Lifetime Dilatation of High Velocity Mesons</b>  | 67 |
| 1. Pro memore : The Heaviside (Maxwell) Analogy for gravitation (or gravitomagnetism).                                       | 67 |
| 2. Gravitomagnetic induction.  | 68 |
| 3. Discussion and conclusion: does relativistic mass exist?  | 70 |
| 4. References and interesting literature.  | 71 |
| <b>Chapter 4 The Behavior of Rotating Stars and Black Holes</b>  | 72 |
| <b>On the geometry of rotary stars and black holes</b>   | 73 |
| 1. Introduction : the Maxwell analogy for gravitation, summarized.   | 74 |
| 2. Gyrotation of spherical rotating bodies in a gravitational field.   | 74 |
| 3. Explosion-free zones and general shape of fast spinning stars.  | 75 |
| 4. General remnants' shape of exploded fast spinning stars.  | 79 |
| 5. Conclusions.  | 80 |
| 6. References.   | 81 |
| <b>On the orbital velocities nearby rotary stars and black holes</b>   | 82 |
| 1. Introduction : the Maxwell analogy for gravitation.   | 83 |
| 2. Gyrotation of spherical rotating bodies in a gravitational field.   | 83 |
| 3. Orbital velocity nearby fast spinning stars.  | 83 |
| 4. Conclusion.   | 86 |
| 5. References.   | 86 |
| <b>Mass- and light-horizons, black holes' radii, the Schwarzschild metric and the Kerr metric</b>                            | 87 |
| 1. The orbital velocities nearby Rotary Stars and Black Holes.   | 88 |
| 2. The bending of light into a circular orbit.   | 91 |
| 3. Deriving the radius of Pure Black Holes.  | 93 |
| 4. Discussion: Three approaches, three important results.  | 95 |
| 5. Conclusion.   | 97 |
| 6. References.   | 98 |
| <b>How Really Massive are the Super-Massive Rotating Black Holes in the Milky Way's Bulge?</b>                               | 99 |
| 1. Basic gyro-gravitation physics for a rotating sphere.   | 99 |

|   |            |
|---|------------|
| 2. Gyrotational centripetal forces.   | 101        |
| 3. Study of the case $v_k s\Omega \gg 1$ .  | 103        |
| 4. Discussion and conclusion.   | 105        |
| 5. References.  | 106        |
| Appendix : Critical radius of a spinning star.  | 106        |
| <b>Chapter 5 How Stars in and outside Galaxies behave</b>   | <b>108</b> |
| <b>Deduction of orbital velocities in disk galaxies, or: “Dark Matter”: a myth?</b>   | <b>109</b> |
| 1. Pro Memore : Symbols, basic equations and philosophy.  | 110        |
| 2. Why do some scientists claim the existence of “dark matter”?   | 111        |
| 3. Pro Memore : Main dynamics of orbital systems.   | 113        |
| 4. From a spheric galaxy to a disk galaxy with constant stars' velocity.  | 114        |
| 5. Origin of the variations in the stars' velocities.   | 116        |
| 6. Conclusion : are large amounts of “dark matter” necessary to describe disk galaxies ?  | 122        |
| 7. References and interesting lecture.  | 122        |
| <b>Introduction to the Flyby Anomaly : the Gyrotational Acceleration of Orbiting Satellites</b>   | <b>123</b> |
| 1. The Maxwell Analogy for gravitation: equations and symbols.  | 123        |
| 2. Calculation of the gyrotation of a spinning sphere.  | 124        |
| 3. The gyrotational accelerations of the satellite  | 125        |
| 4. Axial transform: rotation about the Y-axis   | 125        |
| 5. Conclusions.   | 126        |
| 6. References and bibliography.   | 126        |
| <b>Swivelling time of spherical galaxies towards disk galaxies</b>  | <b>127</b> |
| 1. From a spherical to a disk galaxy.   | 127        |
| 2. The swivelling time from a spherical galaxy to a disk galaxy.  | 128        |
| 3. Discussion.  | 129        |
| 4. Conclusion.  | 129        |
| 5. References and interesting lecture.  | 129        |
| <b>Gravitomagnetic Evolutionary Classification of Galaxies</b>  | <b>130</b> |
| 1. The galaxy evolution from a spherical to a spirally disc galaxy.   | 130        |
| 2. When the global spin of the bulge flips : from a spirally to a turbulent bar galaxy.   | 133        |
| 4. Introduction of a new evolutionary classification scheme for galaxies.   | 135        |
| 5. Conclusions.   | 135        |
| 6. References.  | 136        |
| <b>Chapter 6 On Dancing and Beating Asteroids</b>   | <b>137</b> |
| <b>The Gyro-Gravitational Spin Vector Torque Dynamics of Main Belt Asteroids in relationship with their Tilt and their Orbital Inclination.</b> | <b>138</b> |
| 1. Orbital data of the main belt asteroids, by E. Skoglöv and A. Erikson.   | 138        |
| 2. The observed spin vector distribution, by A. Erikson.  | 142        |
| 3. The Maxwell Analogy for gravitation: equations and symbols.  | 143        |
| 4. Conditions for a maximal and minimal gyrotation on the asteroid's orbital inclination.   | 147        |
| 5. Discussion and conclusions.  | 149        |
| 6. References and bibliography.   | 150        |
| Appendix A : Stability study of the asteroids.  | 151        |
| Appendix B : Calculation of the precession and the nutation.  | 152        |
| Appendix C : Detailed calculation of the relevant torques.  | 153        |
| <b>Cyclic Tilt Spin Vector Variations of Main Belt Asteroids due to the Solar Gyro-Gravitation.</b>   | <b>155</b> |
| 1. Introduction.  | 155        |
| 2. The tilt change and its interpretation.  | 156        |
| 3. Discussion and conclusions.  | 164        |

|  |     |
|--|-----|
| 4. References and bibliography.  | 164 |
| <b>Chapter 7 Interpreting the Cosmic Redshifts from Quasars</b>  | 165 |
| <b>Quasar's Gyro-gravity Behavior, Luminosity and Redshift.</b>  | 166 |
| 1. Pro Memore : Maxwell Analogy equations in short, symbols and basic equations.   | 166 |
| 2. Rotation of galaxies and quasars.   | 167 |
| 3. The gamma-ray production of quasars.  | 169 |
| 4. Comparative gyro-gravitational redshift of the galaxy and the quasar.   | 170 |
| 5. Discussion and conclusions.   | 171 |
| 6. References  |     |
| <b>Towards an Absolute Cosmic Distance Gauge by using Redshift Spectra from Light Fatigue.</b>                           | 173 |
| 1. Pro Memore : The Maxwell Analogy for gravitation: equations and symbols.  | 174 |
| 2. The mechanics and dynamics of light   | 174 |
| 3. The dynamics of the dark energy in the presence of light  | 175 |
| 4. Discussion and conclusion.  | 178 |
| 5. References.   | 179 |
| <b>Chapter 8 Coriolis Gravity Theory</b>   | 180 |
| <b>Is the Differential Rotation of the Sun Caused by a Coriolis Graviton Engine?</b>                                     | 181 |
| 1. Introduction  | 181 |
| 2. Gravity as a Coriolis effect  | 181 |
| 3. Inertia as a Coriolis effect  | 182 |
| 4. Derivation of the Sun's Rotation Equation   | 182 |
| 5. Derivation of the Sun's Differential Rotation Equation  | 183 |
| 6. Discussion  | 183 |
| 7. Conclusion  | 183 |
| 8. References  | 183 |
| <b>The Expanding Earth : Is the Inflation of Heavenly Bodies Caused by Reoriented Particles under Gyrotation Fields?</b> | 184 |
| 1. The expanding earth theory  | 184 |
| 2. The internal gyrotation field of a rotating body  | 184 |
| 3. The preferential orientation of particles under a gyrotation field  | 185 |
| 4. Gravity between particles as a Coriolis effect  | 185 |
| 5. Gravitational consequences of the preferentially like-oriented particles  | 185 |
| 6. Discussion  | 186 |
| 7. Conclusion  | 186 |
| References   | 186 |
| <b>On the Gravitational Constant of Our Inflating Sun and On the Origin of the Stars' Lifecycle</b>                      | 187 |
| 1. Introduction: the expanding Sun and Earth   | 187 |
| 2 The value of the gravitational constant is defined by the quantity of like spin orientations of particles              | 188 |
| 3 The star's lifecycle: a typical gravitomagnetic cycle  | 188 |
| 4 Discussion and conclusion  | 189 |
| References   |     |
| <b>The Expanding Earth : The Inflation of Heavenly Bodies Issues Demands a Compression-Free Inner Core</b>               | 191 |
| 1. The inflation of heavenly bodies is caused by reoriented particles under gyrotation fields                            | 191 |
| 2. The Earth structure with a compression-free core  | 192 |
| 3. The mainstream Earth structure model  | 192 |
| 4. Discussion and conclusion: is a compressed inner core inevitable?   | 194 |

|  |     |
